

Personal Information

Full Name: Ezekiel Chikezie

Profession:

Full-Stack Software Engineer

GitHub: <https://github.com/Ezekiel544>

Phone: +234-703-2568-802

Email: chikezieezekiel3@gmail.com

Address: 24 Eberechi, Aba, Abia State, Nigeria

Languages:

- English — Fluent
 - French — Basic
-

Professional Profile

Full-Stack Software Engineer with a strong track record of building and shipping scalable applications across Web2 and Web3. Built the first prediction market on the VeChain blockchain, co-founded a software development studio, and currently serve as technical lead on multiple live products. Skilled in backend architecture, API development, authentication systems, and modern frontend frameworks, with a focus on writing clean, maintainable, and production-ready code.

Core Competencies

- Full-Stack Web Application Development
 - Backend Architecture & API Design
 - Blockchain & Decentralized Application Development
 - Database Modeling & Management
 - Authentication & Authorization Systems
 - Responsive Frontend Development
 - Software Architecture & Clean Code Practices
 - Team Leadership & Technical Mentorship
-

Technical Skills

Programming Languages

- JavaScript (ES6+)
- TypeScript

- Solidity
- Python
- Rust

Backend Technologies

- Node.js
- Express.js
- RESTful APIs
- JWT Authentication
- Role-Based Access Control (RBAC)
- Middleware Architecture

Frontend Technologies

- HTML5
- CSS3
- JavaScript
- React.js
- Next.js
- Tailwind CSS

Databases

- MongoDB
- Mongoose
- PostgreSQL
- MySQL
- Redis

Web3 & Blockchain

- VeChain Blockchain
- Prediction Market Architecture
- On-chain System Design
- Decentralized Application (dApp) Development
- Smart Contract Integration

Tools & Platforms

- Git & GitHub
 - Postman
 - Figma
 - API Testing & Debugging Tools
-

Professional Experience

Senior Developer Flibber — January 2024 – Present

- Leading the development of full-stack web applications used by end users.
- Designing and implementing backend services using Node.js, Express.js, and MongoDB.
- Developing secure authentication and authorization systems using JWT and RBAC.
- Creating reusable frontend components with React.js and Tailwind CSS.
- Reviewing codebases and mentoring junior developers.
- Collaborating with designers and product managers to ensure technical feasibility and scalability.

Lead Developer Tokicardai — October 2025 – Present (*Product in Active Development*)

- Leading the technical development of a WhatsApp-based virtual card platform.
- Architecting backend systems for user management, transactions, and messaging workflows.
- Integrating third-party APIs to enable real-time interactions and event handling.
- Implementing security best practices including data validation and access control.
- Building internal administrative dashboards for monitoring platform activity.
- Participating in long-term scalability and deployment planning.

Co-Founder & Lead Developer Kryden Studio — Web & Full-Stack Development Studio

- Co-founded a software development studio focused on delivering full-stack web solutions.
- Oversaw technical architecture, tooling decisions, and development workflows.
- Designed and built end-to-end applications for multiple client projects.
- Established coding standards, documentation practices, and version control workflows.
- Coordinated development across multiple projects while ensuring quality and deadlines.

Founder & Full-Stack Developer ChatbotX — April 2024 – Present

- Founded and developed a chatbot platform focused on business automation.
- Designed backend systems to manage user data and conversational workflows.
- Built dashboards for system monitoring and analytics.
- Focused on scalability, maintainability, and user experience.

Blockchain Developer (Independent) VeChain Ecosystem — 2025 – Present

- Designed, architected, and deployed the first prediction market on the VeChain blockchain — a first-of-its-kind decentralized application on the network.
- Built the full on-chain architecture covering smart contract logic, event handling, and frontend integration.

- Gained deep expertise in decentralized application development, blockchain infrastructure, and Web3 UX patterns.

Freelance & Client Work Independent — Ongoing

- Designed and developed multiple landing pages, web applications, and client projects across various industries.
 - Handled full product delivery — from frontend UI and responsive design to backend integration and deployment.
 - Worked directly with clients to translate business requirements into functional, production-ready applications.
 - Delivered projects independently, managing timelines, communication, and quality end-to-end.
-

Education

Rad5 TechHub — Certificate in Frontend Development

- Comprehensive training in HTML, CSS, JavaScript, and frontend frameworks.
 - Completion of multiple real-world development projects.
-

Professional Development

- Self-directed learning in full-stack and blockchain development through platforms such as Udemy and Coursera.
 - Continuous study of software architecture, backend security, system scalability, and Web3 technologies.
 - Practical experience gained through building and maintaining production-style applications across Web2 and Web3.
-

Strengths & Attributes

- Strong analytical and problem-solving skills
- Deep backend engineering expertise — API design, authentication systems, and database architecture
- Ability to design scalable, maintainable, and production-ready systems
- Effective communication and teamwork skills
- Leadership experience in technical environments
- High level of discipline and attention to detail
- Pioneer mindset , proven ability to build first-of-its-kind products

Interests

- Software Architecture
- Backend Engineering
- Blockchain & Web3 Technologies
- Emerging Web Technologies
- Mentoring Junior Developers
